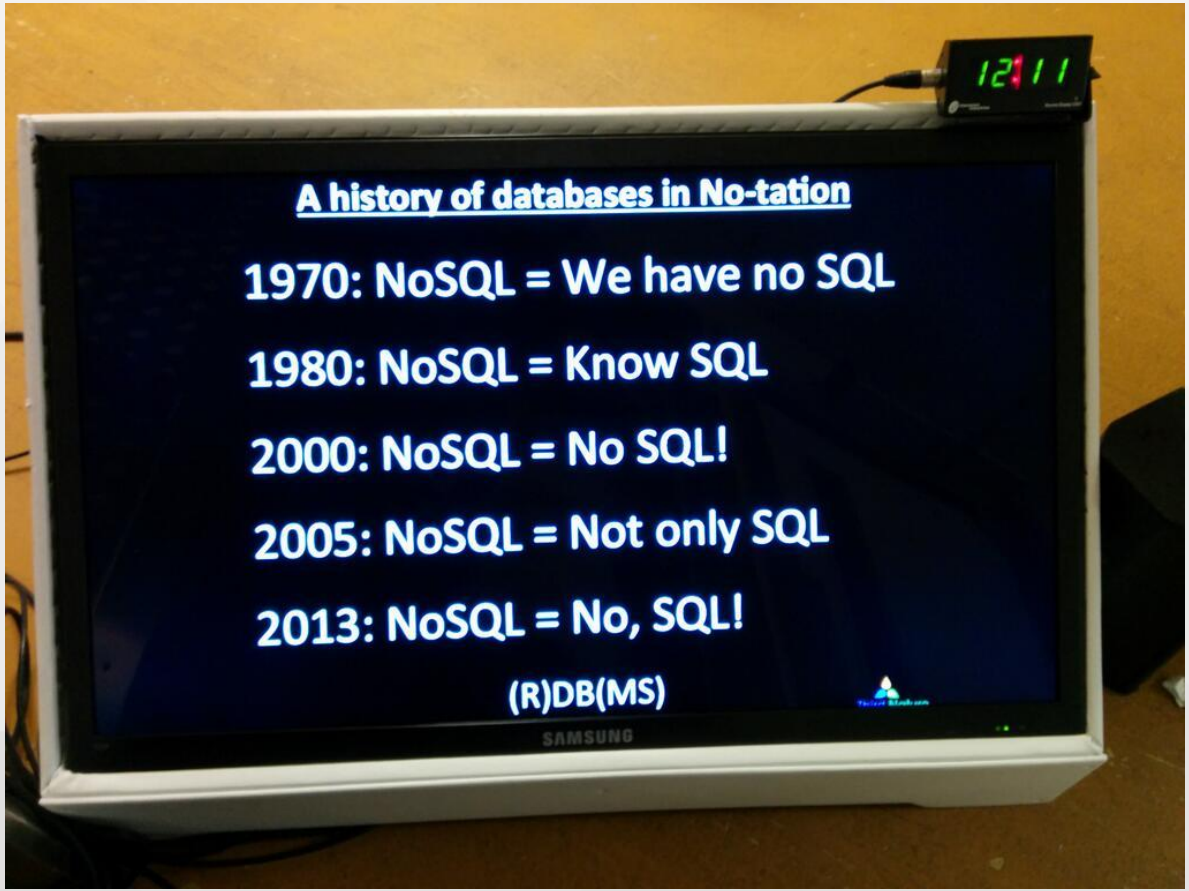
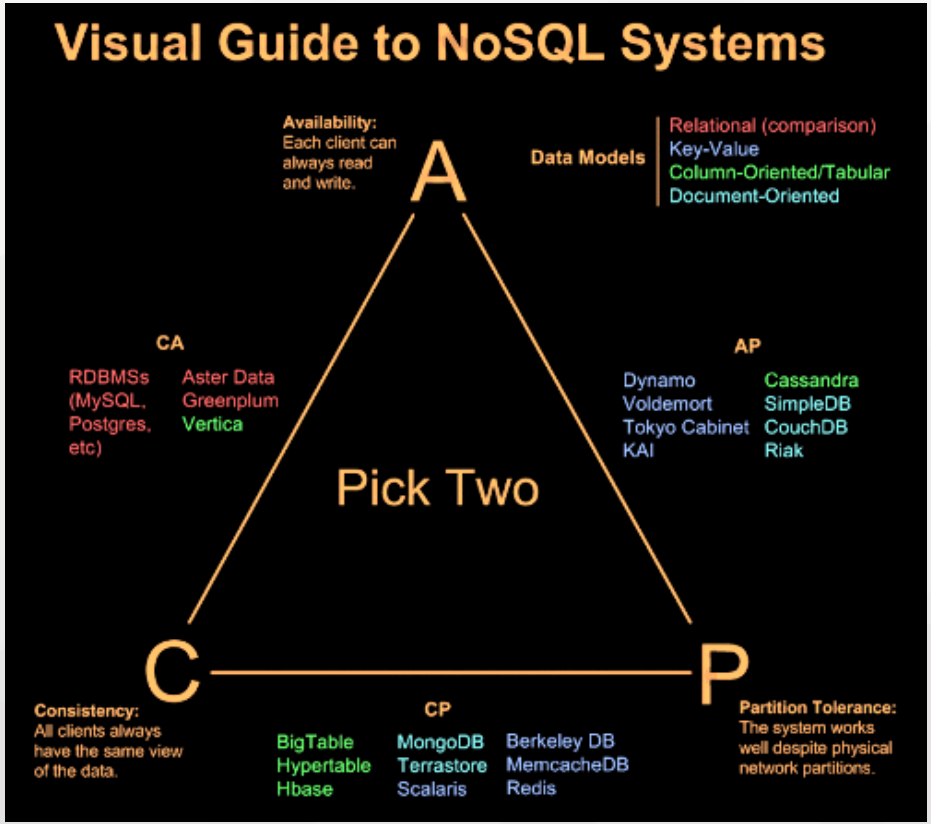
The History of SQL



CAP Theorem



Professor Eric A. Brewer
University of California at Berkeley

Cassandra

Cassandra Write Data Flows

Single Region, Multiple Availability Zone

1. Client Writes to any Cassandra Node
2. Coordinator Node replicates to nodes and Zones
3. Nodes return ack to coordinator
4. Coordinator returns ack to client
5. Data written to internal commit log disk

If a node goes offline, hinted handoff completes the write when the node comes back up.

Requests can choose to wait for one node, a quorum, or all nodes to ack the write

SSTable disk writes and compactions occur asynchronously

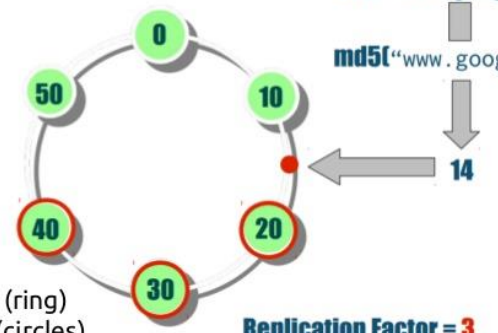
NETFLIX

Architecture

Partitioner:
Consistent Hashing

Key: "www.google.com"

md5("www.google.com")



Replication Factor = 3

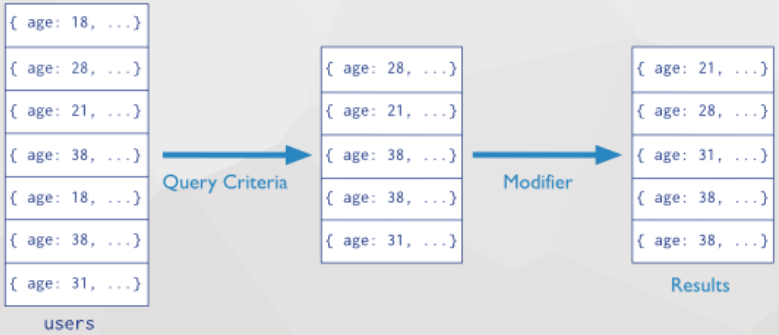
- Cluster (ring)
- Nodes (circles)
- Peer-to-Peer Model
- Gossip Protocol

mongoDB Official Website : https://www.mongodb.org/
The latest stable Release : v3.0.4

```
{
  name: "sue",                    ← field: value
  age: 26,                        ← field: value
  status: "A",                    ← field: value
  groups: [ "news", "sports" ]    ← field: value
}
```

Collection / Query Criteria / Modifier

```
db.users.find( { age: { $gt: 18 } } ).sort( {age: 1 } )
```



```
db.users.insert (                 ← collection
   {
     name: "sue",                 ← field: value
     age: 26,                     ← field: value
     status: "A"                  ← field: value
   }                                  } document
)
db.users.update(                  ← collection
   { age: { $gt: 18 } },          ← update criteria
   { $set: { status: "A" } },     ← update action
   { multi: true }                ← update option
)

db.users.remove(                  ← collection
   { status: "D" }                ← remove criteria
)
```

var ret = { msum: 0, recs: 0, mmin: 0, mmax: 0 };
for(var i = 0; i < vals.length; i++) {
ret.msum += vals[i].msum;
ret.recs += vals[i].recs;
if(vals[i].mmin < ret.mmin) ret.mmin = vals[i].mmin;
if((vals[i].mmax < 100) && (vals[i].mmax > ret.mmax))
ret.mmax = vals[i].mmax;
}
return ret;
},
finalize: function(key, val) {
val.mavg = val.msum / val.recs;
return val;
},
out: 'result1',
verbose: true
});
db.result1.
find({ mmin: { '$gt': 0 } }).
sort({ recs: -1 }).
skip(4).
limit(8);
1 Grouped dimension columns are pulled out as keys in the map function, reducing the size of the working set.
2 Measures must be manually aggregated.
3 Aggregates depending on record counts must wait until finalization.
4 Measures can use procedural logic.
5 Filters have an ORM/ActiveRecord-looking style.
6 Aggregate filtering must be applied to the result set, not in the map/reduce.
7 Ascending: 1; Descending: -1
Revision 4: Created 2010-03-06

HBase Versions

§ 4. Basic Prerequisites

This section lists required services and some required system configuration.

Table 2. Java

HBase Version	JDK 6	JDK 7	JDK 8
2.0	Not Supported	Not Supported	yes
1.3	Not Supported	yes	yes
1.2	Not Supported	yes	yes
1.1	Not Supported	yes	Running with JDK 8 will work but is not well tested.
1.0	Not Supported	yes	Running with JDK 8 will work but is not well tested.
0.98	yes	yes	Running with JDK 8 works but is not well tested. Building with JDK 8 would require removal of the deprecated `remove()` method of the `PoolMap` class and is under consideration. See HBASE-7608 for more information about JDK 8 support.
0.94	yes	yes	N/A

In HBase 0.98.5 and newer, you must set `JAVA_HOME` on each node of your cluster. *hbase-env.sh* provides a handy mechanism to do this.

Attribute
Value
Description
Cache DATA on Read
true
True if DATA blocks are cached on read (INDEX & BLOOM blocks are always cached)
Cache DATA on Write
false
True if DATA blocks are cached on write.
Cache INDEX on Write
false
True if INDEX blocks are cached on write
Cache BLOOM on Write
false
True if BLOOM blocks are cached on write
Evict blocks on Close
false
True if blocks are evicted from cache when an HFile reader is closed
Compress blocks
false
True if blocks are compressed in cache
Prefetch on Open
false
True if blocks are prefetched into cache on open

Quick Start

Quick Start

```
hbase(main):001:0> help
HBase Shell, version 0.91.0-SNAPSHOT, r1130916, Sat Jul 23 12:44:34 CEST 2011
Type 'help "COMMAND"', (e.g. 'help "get"' -- the quotes are necessary) for
help on a specific command. Commands are grouped. Type 'help "COMMAND_GROUP"',
(e.g. 'help "general"') for help on a command group.

COMMAND GROUPS:
  Group name: general
  Commands: status, version

  Group name: ddl
  Commands: alter, create, describe, disable, drop, enable, exists,
            is_disabled, is_enabled, list
```

Quick Start

```
hbase(main):0xx:0>status
hbase(main):0xx:0>version
hbase(main):0xx:0>create 'member','member_id','address','info'
hbase(main):0xx:0>list
hbase(main):0xx:0>describe 'member‘
```
